DRFConnect

Bandwidth Accelerator Solution with One Simple Connection

Sluggish, unreliable, or outdated network connectivity can be detrimental to your business. A fast and reliable connection to the internet is vital to ensure employee productivity, customer care, business operations and quality of service.

That's why DRFortress has partnered with multiple local carriers and telecom providers to bring you **DRFConnect** – a solution that allows businesses to accelerate their internet bandwidth capabilities and improve reliability and security for their network connectivity and mission-critical functions.

With **DRFConnect** as your primary or redundant connectivity solution, your business will reap the following benefits:

- **Significant network cost savings**
- **Improved network performance**
- **Increased productivity and reliability**

DRFortress prides itself on our carrier neutrality and because of relationships we have been able to partner and collaborate with multiple carriers to ensure that the **DRFConnect** multi-honed redundant network design will provide you with the highest level of quality and ensures optimum speed and reliability.

DRFConnect Benefits for Your Business

Faster, More Reliable Access to Cloud-Based Applications & Tools

Demand for your network will continue to grow as more cloud applications and online tools are added to your IT infrastructure. Slow and shaky network connectivity can disrupt business operations when trying to access cloud-based applications. Programs such as Google, Office 365, Salesforce, Zoom, and other networked back-office systems, all require a fast, reliable internet connection to function at their optimum level.

Improved Employee Productivity

Faster and reliable bandwidth enables your employees to download/upload information faster, connect and communicate with customers and suppliers, back up information, and efficiently collaborate with co-workers while reducing frustrations with slow and inadequate connections.

Improved Remote Working & Video Conferencing Capabilities

It's essential to have a swift and stable internet connection when using Cisco WebEx, Microsoft Teams, Zoom, or any other online video conferencing tool. Video conferencing delivers instant and seamless communication with customers and teams anywhere in the world. However, it is imperative to have sufficient bandwidth speed and/or a redundant circuit to ensure remote working capabilities remain as efficient as possible.

Faster & Reliable Data Backup

A redundant, high-speed, and reliable internet connection is crucial for any business with an offsite network storage infrastructure that backs up critical data. With a reliable network connectivity solution, businesses are able to store and share data across multiple business branches or locations. A faster, secure connection provides simple and efficient replication or back up of data in the event of a natural disaster or localized emergency.

Rely on DRFConnect

Cost Savings

Save up to 50% with a single network connection. **DRFConnect** enables your business to have a single connection that has been designed based on the aggregation of multiple redundant telecommunication carrier circuits bundled into one low price.

Redundant Reliable Network Design

Whether using a single **DRFConnect** circuit as your primary internet connection or as a secondary circuit to back up your primary carrier/telecom provider services, the aggregated network design of **DRFConnect** provides the redundancy and reliability needed to operate all of your IT infrastructure systems and applications.

DRFortress Proven Quality & Support

Across Hawaii, DRFortress has earned the reputation of being reliable, fast, courteous, and supportive to all of our customers. **DRFConnect** utilizes enterprise-grade infrastructure and is supported by multiple aggregated circuits from our world-class telecommunication partners. Our on-call operations team is available 24 hours a day, 7 days a week to assist your business.
