

Solutions for Your Mission-Critical Assets

Experience the operational reliability, scalability and security that DRFortress provides for all your mission-critical IT systems. Through its comprehensive suite of world-class data center and best-of-breed cloud services, DRFortress offers a resilient, economical and scalable enterprise-class solution for your vital IT infrastructure.

Colocation

DRFortress offers a network neutral, highly secure, enterprise-class data center designed to provide 100% uptime for your business applications and IT infrastructure. By colocating with DRFortress, you enjoy the ability to deploy only the space, power and resources you currently need, thus reducing or eliminating costs associated with building, installing, replacing and maintaining your own data center or dedicated IT room. Our scalable data center solutions are designed to provide you with the choice and flexibility to scale your footprint, power, connectivity and services as your business needs evolve. Our selection of cabinets, cages, suites and power solutions can be customized to specifically accommodate your unique IT configurations and requirements.

Internet Exchange

DRFexchange is the largest commercial internet exchange in the state, keeping local traffic in Hawaii instead of going to the U.S. Mainland and back for a large portion of internet-based communication. By allowing participants to bypass intermediary networks and instead send traffic to another participant directly, **DRFexchange** provides enhanced end-to-end network performance along with speed, reliability and cost efficiency. DRFortress' fully-redundant peering exchange LAN infrastructure supports port-based VLAN on several types of ethernet interfaces. This allows clients to establish private layer-2 connectivity among their own equipment or with other Peering Exchange clients terminating on the same LAN infrastructure—all backed by guaranteed SLAs.

Cloud Services

DRFortress has partnered with IaaS provider CloudSigma to offer a cloud computing option that is designed to power all of your company's servers and applications in your own secure private cloud network—all while giving you greater flexibility and transparency over your IT capabilities and costs. With **DRFcloud**, you have the ability to instantaneously provision and configure virtualized cloud servers on an as-needed basis while paying only for what you actually use. From root-level access of your cloud infrastructure to metered service with secure online utilization monitoring, bursting and subscription-based billing, and neutral platform and networking capabilities, **DRFcloud** offers virtually unlimited flexibility to help you expand and enhance your IT operations while saving your organization valuable time and money.

Cloud Storage & Filesharing

DRFstorage is designed specifically for organizations seeking high-level security, reliability and redundancy levels for their IT systems and data. **DRFstorage** delivers the performance, manageability, connectivity, scalability and security of traditional physical storage systems with the added benefit of elastic pricing and configuration and no upfront capital investment. Coupled with **DRFfileshare**, our Dropbox-like cloud storage gateway solution powered by Gladinet, **DRFstorage** offers an innovative and economical solution for all your enterprise storage needs.

Cloud Backup

DRFbackup utilizes the leading cloud-based data recovery software from Asigra to provide an enterprise-class agentless cloud backup solution that easily integrates with public, private and hybrid cloud architectures. **DRFbackup** can be deployed with any of our cloud and colocation solutions to ensure your mission-critical data is always protected and 100% recoverable in the event your business experiences a data loss. With **DRFbackup**, you will find the security, manageability and reliability you need in a backup and a disaster recovery solution with the flexibility and cost predictability that a cloud-based service provides.

Remote Assistance

DRFortress' dedicated team of technicians and support staff are available to assist with everything from installation and staging services to augmentation of your existing IT staff via our Remote Assistance services. Through our on-demand technical support, a DRFortress technician is able to perform simple troubleshooting or maintenance tasks that require remote physical assistance. This allows our customers to reduce costs by eliminating the need to dispatch their own personnel to the DRFortress facility to perform simple IT operations/tasks. Our Remote Assistance services are available 24 hours a day, 7 days a week, 365 days a year—offering convenience and the ability to reduce costs and maximize operational uptime of your mission-critical systems and applications.

The DRFortress Advantage

Operational Excellence

The DRFortress data center is the most advanced commercial colocation facility in Hawaii and is operated by a team of professionals with cumulative experience exceeding a century of data center experience.

Exceptional Reliability

DRFortress' operational excellence is matched only by its operational reliability. With an average uptime of 99.9997%, you can be assured of highly-available, uninterrupted service for all your IT infrastructure needs.

Carrier Choice

Don't settle for a less-than-optimal solution from a non-neutral supplier. As the only provider of carrier-neutral solutions in Hawaii, DRFortress offers the unique option to choose the network providers that best meet your needs.

Strategic Flexibility

DRFortress can accommodate and help you design a wide range of IT configurations, ensuring you have the ability to scale your IT infrastructure without having to worry about constraints or costly upgrades.

Critical Mass of Peering Partners

DRFortress is the primary peering point in Hawaii for major wireline and wireless carriers, enterprises, cable companies and ISPs. No other facility in Hawaii comes close to matching the concentration of clients, carriers and partners as the DRFortress ecosystem.

Scalability

Outsourcing the operation, security and maintenance of your data center facilities enables you to leverage the benefits of a world-class infrastructure with less capital investment and to scale to your changing needs.
